

City of Agra

– Water Quality Report *(covers calendar year 2018)*

This pamphlet lists water quality information for the City of Agra. It includes limited details on the source and quality parameters and how our water compares to Environmental Protection Agency (EPA) and state standards. It's important that customers be aware of the efforts that are made continually to improve their water system. To learn more, please attend any of the regularly scheduled meetings that are held on the first Monday of each month at 7:00 p.m. at City Hall, 222 Main Street. For more information, please contact Marcia Horn at 785-638-2811.

The water source for Agra produced from wells. The water is treated to remove contaminants. A disinfectant is also added to protect the water supply against microbial contaminants.

A message from EPA

To ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. The city treats water according to EPA's regulations. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water before treatment may include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture and residential uses.

- **Radioactive contaminants**, which are naturally occurring.

- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

- **Lead**: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children.

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for thirty seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

- **Total Coliform Rule (TCR)**: Coliform bacteria are usually harmless, but their presence in water can be an indication of disease-causing bacteria. When coliform bacteria are found, special follow-up tests are done to determine if harmful bacteria are present in the water supply. If this limit is exceeded, the water supplier must notify the public by newspaper, television or radio. During 2018, the utility collected two samples per month.

Water Quality Data

The table on the reverse side lists all the drinking water contaminants that we detected during the 2018 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless noted, the data presented in this table is from testing done January 1 - December 31, 2018. The state requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old. The bottom line is that the water that is provided to you is safe.

Terms & Abbreviations

- **Maximum Contaminant Level Goal (MCLG)**: The "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLGs allow for a margin of safety.
- **Maximum Contaminant Level (MCL)**: the "Maximum Allowed" MCL is the highest level of a contaminant allowed in drinking water. MCLs are set as close to the MCLGs as feasible using best available treatment technology.
- **Secondary Maximum Contaminant Level (SMCL)**: recommended level for a contaminant that is not regulated and has no MCL.
- **Action Level (AL)**: The concentration of a contaminant that, if exceeded, triggers treatment or other requirements.
- **Technique (TT)**: A required process intended to reduce levels of a contaminant in drinking water.
- **Maximum Residual Disinfectant Level (MRDL)**: Highest level of a disinfectant allowed in drinking water; there is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- **Non-Detects (ND)**: Lab analysis indicates the contaminant is not present.
- **Parts per Million (ppm) or milligrams per liter (mg/l)**
- **Parts per Billion (ppb) or micrograms per liter (µg/l)**
- **Picocuries per Liter (pCi/L)**: A measure of the radioactivity in water.
- **Millirems per Year (mrem/yr)**: Measure of radiation absorbed by the body.
- **Period Average (MPA)**: An average of sample results obtained during a defined time frame, common examples of monitoring periods are monthly, quarterly and yearly.
- **Nephelometric Turbidity Unit (NTU)**: A measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person. Turbidity is not regulated for ground water systems.
- **Running Annual Average (RAA)**: Average of sample results obtained over the most current 12 months and used to determine compliance with MCLs

Testing Results for the City of Agra

There was no microbiological contamination found in the drinking water in 2018.

Regulated Contaminants	Collection Date	Highest Value	Range (low/high)	Unit	MCL	MCLG	Typical Source
ARSENIC	1/8/2018	6.4	6.4	ppb	10	0	Erosion of natural deposits
BARIUM	1/8/2018	0.069	0.069	ppm	2	2	Discharge from metal refineries
CHROMIUM	1/8/2018	7.3	7.3	ppb	100	100	Discharge from steel and pulp mills
FLUORIDE	1/8/2018	0.46	0.46	ppm	4	4	Natural deposits; Water additive which promotes strong teeth.
NITRATE	1/8/2018	5.3	4.9 - 5.3	ppm	10	10	Runoff from fertilizer use
SELENIUM	1/8/2018	25	25	ppb	50	50	Erosion of natural deposits

While the drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider.

Disinfection Byproducts	Monitoring Period	Highest RAA	Range (low/high)	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	2017 - 2019	10	9.9	ppb	60	0	By-product of drinking water disinfection
TTHM	2017 - 2019	13	13	ppb	80	0	By-product of drinking water chlorination

Lead and Copper	Monitoring Period	90 th Percentile	Range (low/high)	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2016 - 2018	0.38	0.0049 - 0.58	ppm	1.3	0	Corrosion of household plumbing
LEAD	2016 - 2018	3.2	1.9 - 3.5	ppb	15	0	Corrosion of household plumbing

Radiological Contaminants	Collection Date	Highest Value	Range (low/high)	Unit	MCL	MCLG	Typical Source
COMBINED RADIUM (-226 & -228)	1/26/2018	0.7	0.7	PCI/L	5	0	Erosion of natural deposits

Secondary Contaminants-Non Health Based Contaminants-No Federal Maximum Contaminant Level (MCL) Established.	Collection Date	Highest Value	Range (low/high)	Unit	SMCL
ALKALINITY, TOTAL	1/8/2018	260	260	MG/L	300
CALCIUM	1/8/2018	200	200	MG/L	200
CHLORIDE	1/8/2018	110	110	MG/L	250
CONDUCTIVITY @ 25 C UMHOS/CM	1/8/2018	1300	1300	UMHO/CM	1500
CORROSIVITY	1/8/2018	0.64	0.64	LANG	0
HARDNESS, TOTAL (AS CaCO3)	1/8/2018	600	600	MG/L	400
MAGNESIUM	1/8/2018	23	23	MG/L	150
MANGANESE	1/8/2018	0.0021	0.0021	MG/L	0.05
NICKEL	1/8/2018	0.012	0.012	MG/L	0.1
PH	1/8/2018	7.5	7.5	PH	8.5
PHOSPHORUS, TOTAL	1/8/2018	0.046	0.046	MG/L	5
POTASSIUM	1/8/2018	8	8	MG/L	100
SILICA	1/8/2018	51	51	MG/L	50
SODIUM	1/8/2018	58	58	MG/L	100
SULFATE	1/8/2018	250	250	MG/L	250
TDS	1/8/2018	890	890	MG/L	500
ZINC	1/8/2018	0.0084	0.0084	MG/L	5

The city did not report monitoring under the ground water rule in July and August.

DRINKING WATER NOTICE

Ground Water Rule Reporting Requirement Not Met by City of Agra Water System

The City of Agra public water supply system violated a reporting requirement established for the Ground Water Rule (GWR) under 40 CFR 141.405. Even though this was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During four days in July and nine days in August 2018, we failed to report results of compliance monitoring required by the GWR to confirm achievement of 4-log removal treatment of viruses in the drinking water through disinfection. Therefore, we cannot be sure of the quality of our drinking water during that time.

What happened: We are required to submit a monthly report of minimum measured and minimum required daily-disinfection residuals both entering the distribution system or at the first customer, whether monitoring is daily or continuous and if there were any interruptions or drops in treatment levels exceeding four hours. A reporting violation occurred because of failure to submit a completed Monthly Disinfection (4-log treatment) Report for the Ground Water Rule during July and August 2018.

What you should do: There is nothing you need to do at this time.

What we are doing: Since it is our desire to provide the safest water possible to our consumers, we have taken the action of _____, ~~begin~~ paying closer attention to our sampling program and daily record keeping.

For more information, please contact Name: FRANCIS GORDON at Phone: 785-638-2811
or by Mail: 222 MAIN ST, PO BOX 37, AGRA, KS 67621

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by CITY OF AGRA WATER SYSTEM
